

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims

Claim 1. (Currently Amended) A mirror mounting assembly for preventing unwanted movement of said mirror comprising:

- a mirror support for holding a mirror,
- a base portion,
- a pivoting joint between said mirror support and said base portion that allows said mirror support to pivot with respect to said base portion,
- a link extending between said mirror support and said base, a first end of said link held with respect to either said mirror support or said base portion, and
- an aperture having a pair of walls with one of said walls being resiliently moveable, wherein said aperture is located in either said mirror support or said base into which the second end of said link locates, there being a tight sliding fit between said pair of walls of said aperture and said link which allows said link to move through said aperture so that said mirror support may be adjusted with respect to said base, but which acts to prevent unwanted movement of said mirror support during normal use.

Claim 2. (Original) A mirror mounting assembly according to claim 1 wherein said link is pivotally attached to said mirror support.

Claim 3. (Original) A mirror mounting assembly according to claim 2 where said first end of said link comprises a ball, said mirror support further comprising a socket within which said ball locates.

Claim 4. (Cancelled)

Claim 5. (Currently Amended) A mirror mounting assembly according to claim [[4]] 1 wherein said link comprises a flat elongate member.

Claim 6. (Original) A mirror mounting assembly according to claim 5 wherein said link has a generally rectangular cross-section.

Claim 7. (Currently Amended) A mirror mounting assembly according to claim [[4]] 1 further comprising a spring applying force to one of said walls.

Claim 8. (Previously Presented) A mirror mounting assembly according to claim 1 wherein said aperture comprises a pair of walls where one of said walls is movable and further comprising a force member so that said wall is resiliently movable.

Claim 9. (Original) A mirror mounting assembly according to claim 8 wherein said force means comprises a spring.

Claim 10. (Previously Presented) A mirror mounting assembly according to claim 9 wherein said force member comprises a spring.

Claim 11. (Previously Presented) A mirror mounting assembly according to claim 1 wherein said aperture comprises a pair of movable walls and further comprising a force member to allow resilient movement of said walls.

Claim 12. (Original) A mirror mounting assembly according to claim 11 wherein said walls are held together by a frame where said frame is attachable to said base portion.

Claim 13. (Previously Presented) A mirror mounting assembly according to claim 12 wherein said force member comprises a spring.

Claim 14. (Previously Presented) A mirror mounting assembly according to claim 8 wherein said link comprises a flat elongate member.

Claim 15. (Original) A mirror mounting assembly according to claim 13 wherein said link has a generally rectangular shape.

Claim 16. (Currently Amended) A mirror mounting assembly for preventing unwanted movement of said mirror comprising:

- a mirror support for holding a mirror,
- a base portion,
- a pivoting joint between said mirror support and said base portion that allows said mirror support to pivot with respect to said base portion,
- a pair of links extending between said mirror support or said base,
- a pair of apertures each having a pair of walls with one of said walls being resiliently moveable wherein said pair of apertures are located in either said mirror support or said base into which [[the]] second ends of said links locate, there being a tight sliding fit between said pair of walls of each said apertures and said links which allows said links to move through said apertures so that said mirror support may be adjusted with respect to said base, but which act to prevent unwanted movement of said mirror support during normal use.

Claim 17. (Currently Amended) A mirror mounting assembly according to claim 16 wherein ~~each said aperture comprises a pair of walls, one of said walls of each said aperture being movable and further comprising~~ each said resiliently moveable wall has a force member applied to each said movable wall so that they are resiliently movable.

Claim 18. (Currently Amended) ~~A mirror mounting means according to claim 17 wherein said force member comprises a spring placed between said movable walls~~
A mirror mounting assembly for preventing unwanted movement of said mirror comprising:

- a mirror support for holding a mirror,
- a base portion,
- a pivot joint between said mirror support and said base portion that allows said mirror support to pivot with respect to said base portion,
- a pair of links extending between said mirror support or said base,
- a pair of apertures each having a pair of walls with one of said walls being resiliently moveable wherein said pair of apertures are located in either said mirror support or said base into which second ends of said links locate, there being a tight sliding fit between said pair of walls of each of said apertures and said links which allows said links to move through said apertures so that said mirror support may be adjusted with respect to said base, but which act to prevent unwanted movement of said mirror support during normal use, and
- a force member having a spring placed between said moveable walls to allow said moveable walls to move resiliently.

Claim 19. (Original) A mirror mounting means according to claim 18 wherein said movable walls are hinged to said base portion.

Claim 20. (Currently Amended) ~~A mirror mounting means according to claim 17~~
A mirror mounted assembly for preventing unwanted movement of said mirror comprising:

- a mirror support for holding a mirror,
- a base portion,
- a pivot joint between said mirror support and said base portion that allows said mirror support to pivot with respect to said base portion,
- a pair of links extending between said mirror support or said base, wherein said links comprise flat elongate members with a generally rectangular cross-section and

a pair of apertures each having a pair of walls with one of said walls being resiliently moveable wherein said pair of apertures are located in either said mirror support or said base into which second ends of said links locate, there being a tight sliding fit between said pair of walls of each said apertures and said links which allows said links to move through said aperture so that said mirror support may be adjusted with respect to said base, but which act to prevent unwanted movement of said mirror support during normal use.

Claim 21. (Original) A mirror mounting means according to claim 17 wherein each said pair of walls is held together by a frame where said frame is attachable to said base portion.

Claim 22. (Cancelled)
